Grade	**10.00** out of 10.00 (**100**%)

Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using the counter method.

```
void func(int n)
{
    if(n==1)
    {
      printf("*");
    }
    else
    {
     for(int i=1; i<=n; i++)
     {
       for(int j=1; j<=n; j++)
       {
          printf("*");
          printf("*");
          break;
       }
     }
   }
 }
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer: (penalty regime: 0 %)

```c
#include <stdio.h>

int main()
{
    int n;
    scanf("%d",&n);

    int count = 0;

    count++;                // if(n==1)

    if(n==1)
    {
        count++;
    }
    else
    {
        count++;            // i=1 condition
        for(int i=1;i<=n;i++)
        {
            count++;        // j=1 condition
            for(int j=1;j<=n;j++)
            {
                count++;    // break
                count++;
                break;

            }

            count++;        // i++
            count++;

        }
    }
```

```
36
37      printf("%d",count);
38
39      return 0;
40  }
```

	Input	Expected	Got	
✔	2	12	12	✔
